

Thermomirror

Mirrors are virtually guaranteed to steam up when using bathrooms and showers due to the condensing effect of cold glass. Now there is a clear solution: Thermomirror.

No more need to wipe mirrors dry because Thermomirror is a superthin (0.4mm) behind mirror heating element, controlled by the light switch or our PIR movement sensor (stock no 5264).

Very safe to use, Thermomirror creates a steam-free mirror in any location, providing clear visibility when you need it most.

The new self adhesive backing makes installation even easier.

Features

- STOCKED IN 7 PRACTICAL SIZES
- STANDARD LENGTHS UP TO 10M AVAILABLE
- CAN BE USED SINGLY OR IN MULTIPLES
- IP44 RATED AVAILABLE
- TESTED TO 2500V
